Part 1: Research Plan.

* **Project Name:** [YardWise]
* **Research Lead:** [Anthony Lucero]
* **Core Research Objective:** Features that are wanted within our YardWise application.

1. Key Research Questions (KRQs)

1. What kind of features would you like to see in a gardening application?

2. Target Participant Profile (User Persona)

* **Role/Title:** [Forestry Students, Horticultural Students, Gardening Enthusiasts, Landscapping Professional, etc.]
* **Behavioral Criteria:** [Deals with gardening and landscaping on all levels.]

Part 2: Moderated User Interview

Interview 1 (Local Business Owner): Weather needs to be included in YardWise so that users don’t need to go to other sites/apps in order to manually cross-reference for their garden data. Users don’t want to do this much work in an app that is supposed to provide convenience.

Interview 2 (Forestry Student): A budget option needs to be included in YardWise so that users know an estimated price for whatever project they are working on. Users want a price they are working with and don’t want to estimate the prices themselves.
